<b>Project Title</b>	Security of Electric Vehicle Charging Infrastructure
<p><b>PROJECT DESCRIPTION</b></p> <p>The rise of Electric Vehicles (EVs) drives an increase in demand and rapid development of the charging infrastructure, where a charger interconnects with an EV and a charging provider as well as a site controller to authorise charging sessions and report any errors. Charging providers may federate with each other to permit cross-network interoperability and will incorporate with energy companies for automated billing in the near future. Exploring the operations and security of such an interconnected system is, therefore, crucial to avoid building insecure infrastructure.</p> <p>Attacks on these interconnected systems stretch their potential impact from relatively minor local effects to long-term national disruptions. This project aims to explore the Electric Vehicle Supply Equipment (EVSE) vulnerabilities and the impact of cyberattacks on the EVSE environment and to develop innovative protections (potentially based on zero-knowledge proof, physically unclonable function, attribute-based privacy-preserving data sharing and data-driven anomaly detection) to secure the EV charging infrastructure.</p> <p><b>Academic qualifications</b></p> <p>A first degree (at least a 2.1) ideally in Electronic Engineering or Computer Science with a good fundamental knowledge of Cybersecurity.</p> <p><b>English language requirement</b></p> <p>IELTS score must be at least 6.5 (with not less than 6.0 in each of the four components). Other, equivalent qualifications will be accepted. <a href="#">Full details of the University's policy</a> are available online.</p> <p><b>Essential attributes:</b></p> <ul style="list-style-type: none"> <li>• Experience of fundamental System Security</li> <li>• Competent in handling High Voltage Electrical Equipment and Critical Analysis</li> <li>• Knowledge of Electric Vehicle Charging Infrastructure</li> <li>• Good written and oral communication skills</li> <li>• Strong motivation, with evidence of independent research skills relevant to the project</li> <li>• Good time management</li> </ul> <p><b>Desirable attributes:</b></p> <ul style="list-style-type: none"> <li>• Experience in Electric Vehicle Supply Equipment Standards and Communication Protocols</li> <li>• Good knowledge of Zero-knowledge Proof, Privacy-preserving Data Sharing</li> <li>• Preliminary experience in Federated Learning and its applications</li> </ul>
